

QWIK FACTS

About The Qwik Jon® Premier

SIDE HANDLES

The Qwik Jon® Premier comes equipped with recessed, grooved side handles that make lifting and transporting the unit easy and convenient.

BUILT-IN CHECK VALVE

The integrated check valve and union-style discharge elbow simplify maintenance. The elbow can be unscrewed for service while the check valve remains closed, helping prevent backflow and spills. Previous designs required removing a check valve mounted directly in the lid.

RIGHT-ANGLED PLUG

The UL-listed neoprene cord and right-angled plug provide a cleaner installation while reducing the risk of accidental unplugging and damage common with standard plugs.

IP68 RATING

Unlike competing IP44-rated units, the Qwik Jon® Premier features an IP68 rating. The "6" is the best rating on the scale for solids and indicates the unit is dust-tight around the electrical components, meaning full-fledged dust protection! The "8" is also the highest rating on the scale, meaning that if you submerge the Qwik Jon®, it is protected against the effects prolonged water exposure. Tighter seals help protect internal components, contain odors, and promote longer system life in wet or flood-prone environments.

SLOPED BASE

The base of the Qwik Jon® Premier tank is sloped downward toward the bottom of the grinder pump mechanism to ensure the majority of the water evacuates the system after each cycle. This sloped design also helps with performance and water stagnation in corners, thereby lessening the potential for odors.

ABS PLASTIC TANKS

The Qwik Jon® Premier uses durable ABS plastic tanks that are stronger and tougher than typical polypropylene designs. ABS is trusted in demanding applications, helping the tank withstand tough conditions and deliver long-lasting performance.

TWO-YEAR LIMITED WARRANTY

We are confident in our products and want our customers to be too. The Qwik Jon® Premier is backed by a two-year limited warranty, providing twice the coverage of some competing systems and reinforcing our commitment to quality and reliability.

REMODELING MADE EASY

The Qwik Jon® is a great option for older homes! Installing traditional plumbing in older homes would require cutting through multiple layers of flooring. With the Qwik Jon®, there is no need to tear up flooring since the internal pump takes the place of traditional gravity drainage. The Qwik Jon® and the ADA compliant Qwik Jon® Toilet will sit directly on the floor.

FLEXIBLE INSTALLATION OPTIONS

The Qwik Jon® Premier allows you to install a complete bathroom up to 23 ft below or 139 ft away from the main sewer line. This provides installation flexibility for applications like basements, tenant buildouts, warehouses, or anywhere that gravity drainage is not available.

10-5090

QWIK ALARM

The Qwik Alarm can be paired with the Qwik Jon® Premier to alert if the water level in the system gets too high. Equipped with a water-resistant buzzer and circuit board, the Qwik Alarm can withstand total immersion. It's compact in size and can be installed within minutes!

TRI-SLICE® CUTTER TECHNOLOGY

The Qwik Jon® Premier, a 1/2 HP grinder pump system, is equipped with Tri-Slice® Cutter Technology. Featuring three independent cutting channels capable of 250,000 cuts per minute, the stainless-steel cutter and cutter plate is engineered to handle toilet paper, organic waste, and sanitary items.

202-2000

QWIK JON® TOILET

Qwik Jon® Upflush Systems require a rear-outlet toilet, which are proven to use less water than a standard toilet. The Qwik Jon® Toilet makes installation and repairs easier because there is no need to lift the toilet and disrupt the wax seal. The ADA compliant Qwik Jon® Toilet has a decorative tank and lid as well as a soft closing hinged toilet seat for prolonged life.
