SEE THE LIGHT!

One Glimpse and Know Your Pump Has Power.

July 2024 – Zoeller Pump Company, a leader in the pump industry, is excited to announce that their most popular sump pumps now come with the Zoeller LED Plug. Lighting the way since 2016 with the industry's first LED plug in a basement sump application, Zoeller is proud to bring you this extended product offering with power you can see. The sump pump is the heart of your home's water protection system. Without power, the risk of basement flooding increases. This simple yet effective feature eliminates guesswork, allowing plumbers and homeowners to visually check for power.

'Does the pump have power?' This is the number one question when troubleshooting a malfunctioning sump pump. Without being at the site, the plumber can determine if their customer's pump or system has power by how this question is answered. In a dark basement or crawl space, the Zoeller LED Plug provides enough light that the homeowner can check for power at a quick glance.

Enhancements such as this are part of Zoeller's focus on providing quality products for their customers so that when an emergency arises, they know they can depend on Zoeller pumps and systems to keep their home dry and water moving. Where traditional plugs keep you guessing, the Zoeller LED Plug leaves no doubt. SEE THE LIGHT!
